

■ Crossfade Between Songs

Rainy Music Player — Feature Testing Document

Feature Description

Why It Was Added

Step-by-Step Testing Instructions

Expected Results

- ✓ Crossfade menu opens/closes correctly and positions above the anchor button.
- ✓ Power toggle enables/disables crossfade with visual feedback (button color + toast).
- ✓ Duration slider and presets update the value in real time and persist to localStorage.
- ✓ During crossfade: current song volume decreases while next song volume increases following an equal-power (cos/sin) curve — no abrupt volume jumps.
- ✓ After crossfade: primary audio takes over seamlessly at the correct position; secondary audio is stopped and cleaned up.
- ✓ Now-playing UI (title, artist, artwork, progress bar, media session) updates correctly.
- ✓ Keyboard shortcut X toggles crossfade on/off from anywhere (except input fields).
- ✓ Settings survive page refresh (localStorage persistence).
- ✓ Manual skip or pause during crossfade cancels it cleanly without audio glitches.
- ✓ Repeat-one mode does NOT trigger crossfade (song loops normally).
- ✓ End of playlist without repeat-all: no crossfade triggered, playback stops naturally.

Edge Cases to Check
